

case study: Gnangara

project: Gnangara Branch Sewer Works

client: Water Corporation

location: Gnangara WA

product: Flowtite GRP Pipe & Fittings

manufacture & supply: DN1200 & DN600, PN1 3mtr lengths x approx 2.8kms

value: \$0—\$5m

year of project: 2009/2010

description: Flowtite GRP Pipe was selected due to Flowtite's high quality product offering technical support and superior corrosion resistance. The combination of 3m lengths, the light weight but rigid construction and Flowtite's Rubber Ring REKA Joints made installation simple and fast. This was necessary due to Gnangara's difficult conditions and the high level of the water table which meant that pipes were required to be backfilled straight after laying.
